Step by step validation in Oxygen XML Editor

To validate your XML file with a RelaxNG schema containing embedded Schematron rules follow these steps:
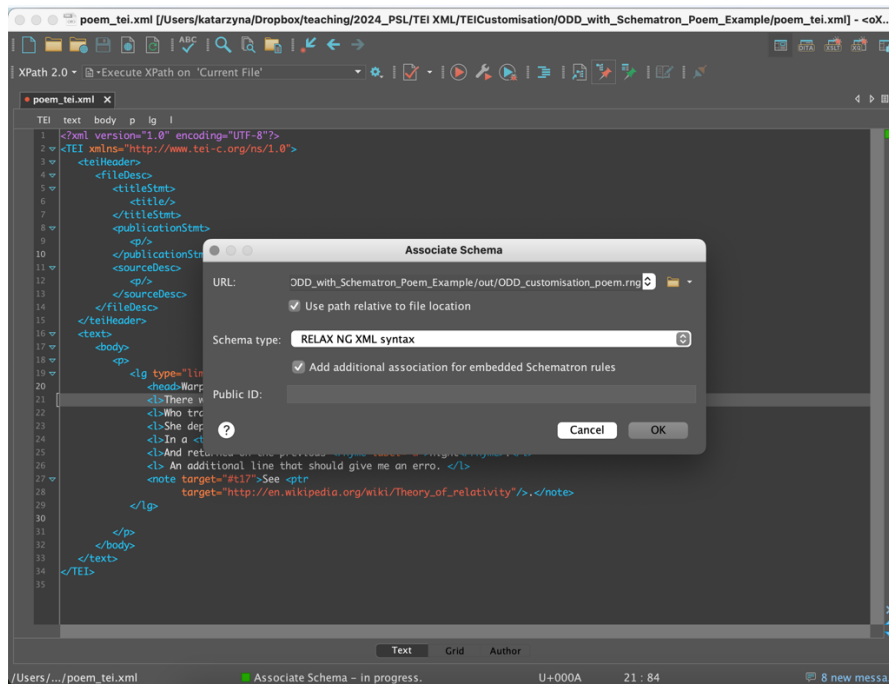

Step 1:
- Open your XML file in Oxygen

Step 2:
- Click on the red pin in the toolbar ("Associate Schema").
- A pop-up window will appear.

Step 3:
- Click on the folder icon next to the URL bar and find the RNG schema you have saved on your drive.
- Tick the box: "Add additional associations for embedded Schematron rules".
- *(Optional)* tick the box "Use path relative to file location".
- Click "OK"

Step 4:
- Cross your fingers and hope that your XML is valid.
- You can see at the bottom of your screen whether the file is valid or not.
- If you see a green box, congratulations, your file is valid, you have no errors!
- If you see a red box, it means that you have some errors to fix. It will tell you how many errors and where they are.
